

Florida Citrus Harvesting Season

U.S. and Florida Production

U.S. citrus utilized production for the 2011-2012 season totaled 11.7 million tons, down slightly from the 2010-2011 season. Florida accounted for 65 percent of the total United States citrus production, while California totaled 32 percent, and Texas and Arizona combined produced the remaining 3 percent. Total utilized citrus production was down from the previous year in all citrus reporting states except Florida.

Florida's share of U.S. citrus production was 170.9 million boxes in the 2011-2012 season, up 3 percent from the previous season's 166.1 million boxes. Production of oranges increased while production of grapefruit and tangerines decreased. Tangelo production remained unchanged from the 2010-2011 season.

Florida's all orange production increased by 4 percent to 146.6 million boxes. Navel production is 2.65 million boxes, unchanged from the 2010-2011 season. All grapefruit production is down 5 percent to 18.9 million boxes. Production of Honey tangerines is down 4 percent and early tangerine production is down 10 percent, resulting in an 8 percent decrease in all tangerines.

Production by Area and County

Each production area showed an increase in citrus production compared to 2010-2011 except the Indian River District which produced 1.3 million boxes less than the 2010-2011 season. The top 5 citrus producing counties were Polk (31.2 million boxes) Highlands (23.7 million), Hendry (19.9 million), DeSoto (18.6 million), and Hardee (13.8 million). Polk County had the largest actual increase in production while Indian River county production decreased the most. By percentage, Pasco County had the greatest increase and Martin County lost the most.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2011-2012 United States citrus crop was up 6 percent from last season, at \$3.44 billion (packinghouse-door equivalent). Orange value of production increased 5 percent from last season while grapefruit value is up 1 percent. Tangerine and mandarin value of production is 6 percent higher than last season and lemon value of production is up 16 percent. Tangelo value increased 44 percent from the previous season.

Florida's \$1.35 billion preliminary on-tree value of the 2011-2012 citrus crop is 1 percent less than the revised value of \$1.37 billion for 2010-2011. The price per box is higher for grapefruit and tangelos but lower for all other citrus. The tangelo on-tree value increased nearly 73 percent from last season. Non-Valencia oranges and all grapefruit also had increases in the value of production of 5 percent and 2 percent respectively.

Citrus: Florida Value of Sales On-Tree, Crop Years 2002-2003 through 2011-2012

Crop year	Value ¹ (1,000 dollars)	Crop year	Value ¹ (1,000 dollars)
2002-2003	787,378	2007-2008	1,283,994

³ Preliminary.

Foreign Exports

Fresh fruit exports totaled 9.8 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 15.3 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 3.9 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2011-2012 season.

Frozen Concentrate

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.628480 gallons per box of 42° Brix concentrate. A record FCOJ yield of 1.672737 was set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.529715 gallons per box. The late crop yielded 1.745597 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.324913 gallons per box of 40° Brix concentrate, down slightly from last season's final of 1.327872 gallons per box.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.586671 gallons per box of 42° Brix concentrate was higher than last season's final of 1.438629 gallons per box.

Tree Inventory

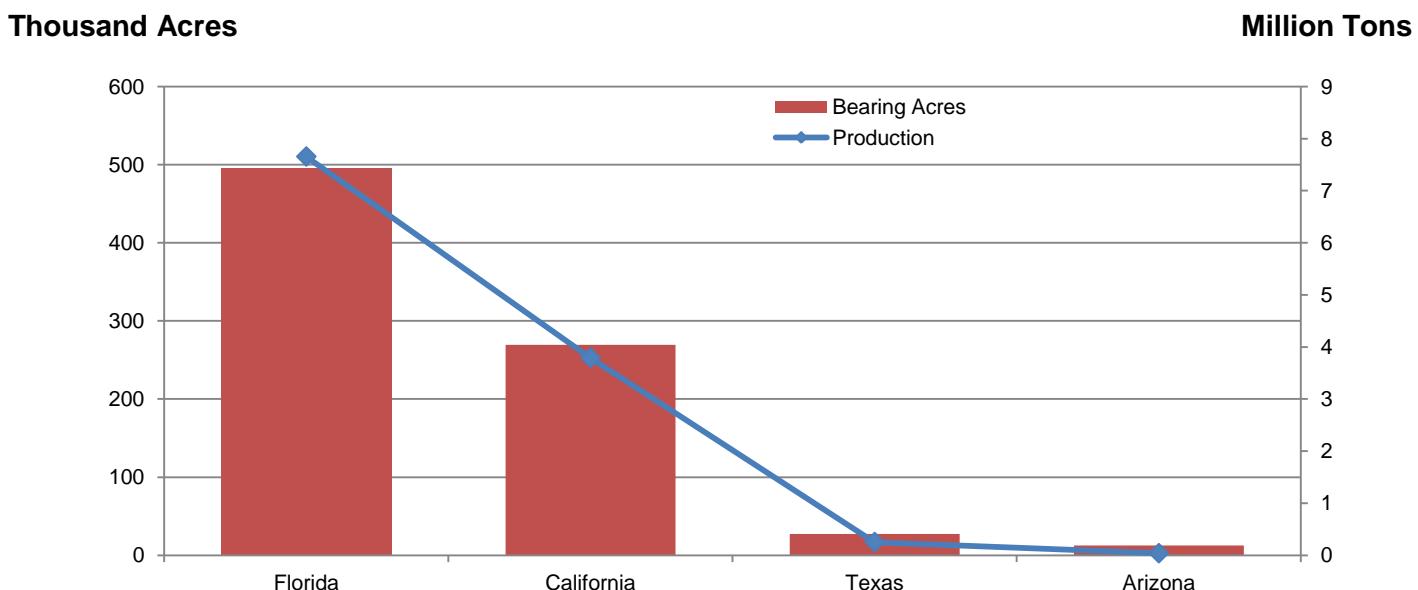

Results of the annual commercial citrus inventory show total citrus acreage is 531,493, down 2 percent, from the last survey and the lowest in a series which began in 1966. Compared to the previous inventory, the net decrease of 9,835 acres is less with a lower gross loss (19,383) and slightly more new plantings (9,548).

Of the 29 counties included in the survey, 24 recorded decreases in acreage, and 5 showed increases. Martin County, down 2,863 acres, has suffered the greatest loss for four straight years and has been declining since 1994. DeSoto County has recorded gains in the last 5 surveys and this year's gain of 1,011 is the most of any county. Polk remains the leader in acreage with 82,572 and in trees with 9.9 million.

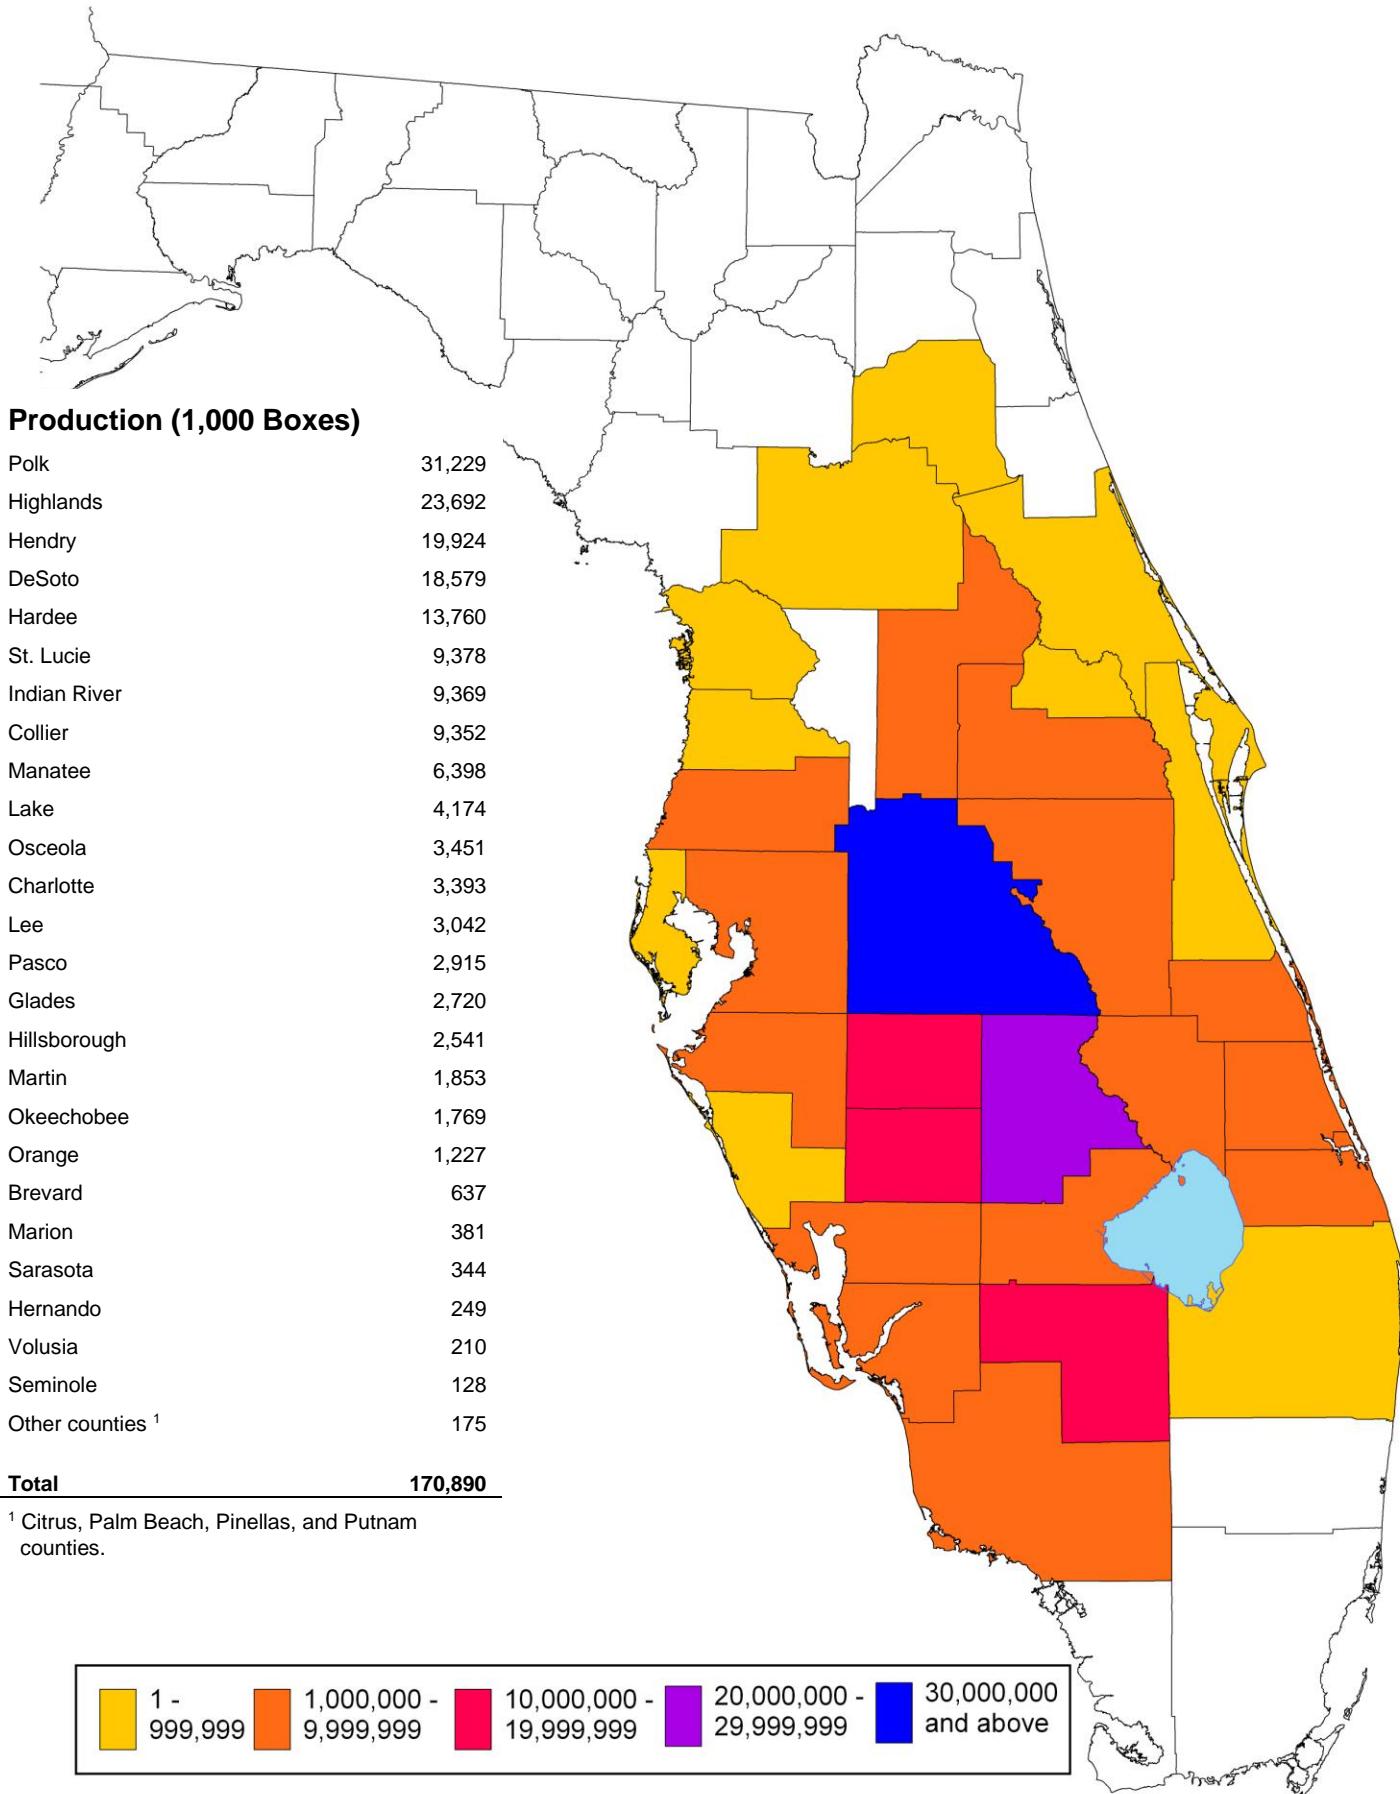

Orange acreage declined for the eighth consecutive survey to 464,918, replacing the previous record low of 466,252 tallied in the 1986 inventory. Grapefruit acreage fell to a new low of 48,191, representing only 54 percent of the pre-hurricanes figure. Specialty acreage continued to decline to a record low of 18,384 and represents only 3.5 percent of the total citrus acreage.

Total citrus trees have declined steadily from the peak in 1998 to 69,565,400. Polk is the leader with over 9.9 million trees, followed by Hendry with 9.6 million, DeSoto with 8.6 million, and Highlands with 7.9 million trees. The total is composed of oranges, over 89 percent; grapefruit, almost 8 percent; and the remainder, including specialty and other citrus, at 4 percent. Since 2011, bearing trees decreased nearly 1.5 percent to 64,982,000 while non-bearing trees decreased by 3 percent to 4,583,400.

Avocados in Florida

Production of Florida avocados increased from the previous season by 344,000 bushels, or 38 percent. Bearing acreage is estimated at 7,400 acres. The price per bushel is \$18.90, down 6 percent from the previous season. Total value of crop production is \$23,512,000.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California and are available from June through the end of February.
